ALPHA CONTROL ECOSYSTEM [ACE]

VIDEO INTERCOM · KEYLESS ENTRY · ACCESS CONTROL

The front door, in your pocket.

Visitors scan a plaque and video-call your phone. You see them, talk, and open the door from anywhere: the sofa, the office, even the car. No wiring into homes, no handsets, no keys to lose.

No app for visitors

Face ID entry

Answer in the car

PRODUCT GUIDE · 2026

• THE IDEA

You forget your keys. You forget your wallet. You never forget *your phone.*

It's the one thing everyone carries, everywhere. So we made it the intercom, the doorbell and the key, for every resident, at every entrance.

Your intercom | Your doorbell | Your key

• THE PLATFORM

One app. Every way in.

Video intercom, keyless entry and access control in one place. Residents choose how they open the door. Managers run every entrance from one dashboard.

Video intercom

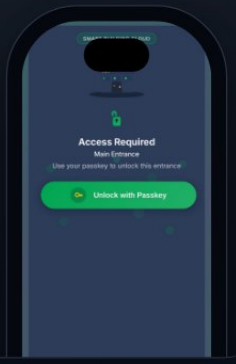
Visitors scan the plaque and video-call the home. No app for them, no wiring into flats for you.

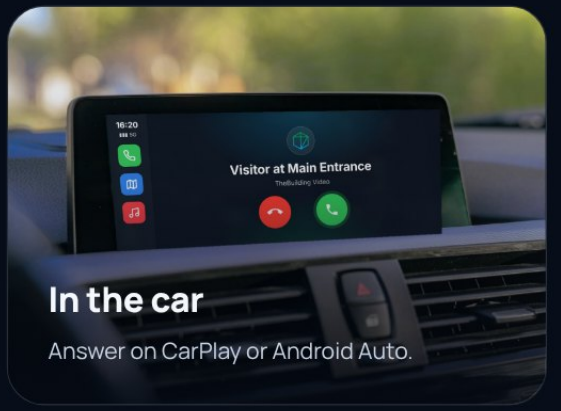
- Rings like a phone call
- Live preview before you answer
- Every phone in the home rings
- Unlock in one tap

Door unlocked
Main Entrance · just now

Face ID entry

Open the door with a look. No fob, no key.





In the car

Answer on CarPlay or Android Auto.

On your wrist

Answer and unlock from Apple Watch or Wear OS.

“Hey Siri, unlock gate.”

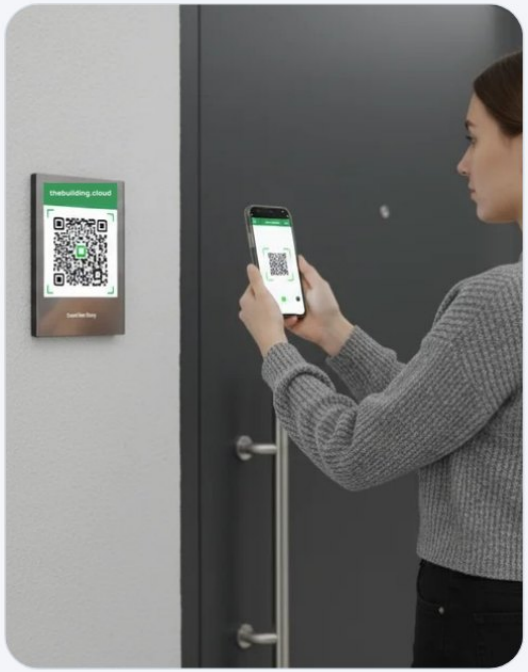
Or Google Assistant. A voice shortcut for each entrance.

• FOR VISITORS

Scan. Call. Walk in.

No app, no account, no buttons. Visitors only need the phone camera they already have.

1 Scan the plaque

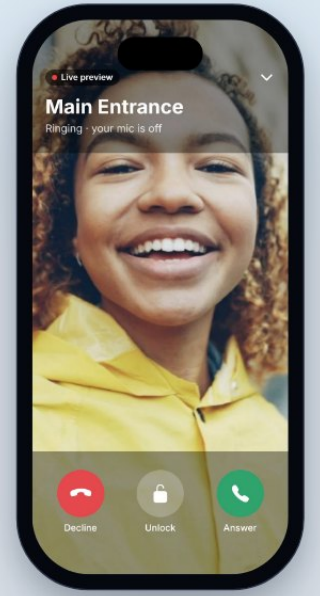


The phone camera opens a secure call page. Nothing to download.

2 Choose the home

Search or scroll to the flat. Only that home is called.

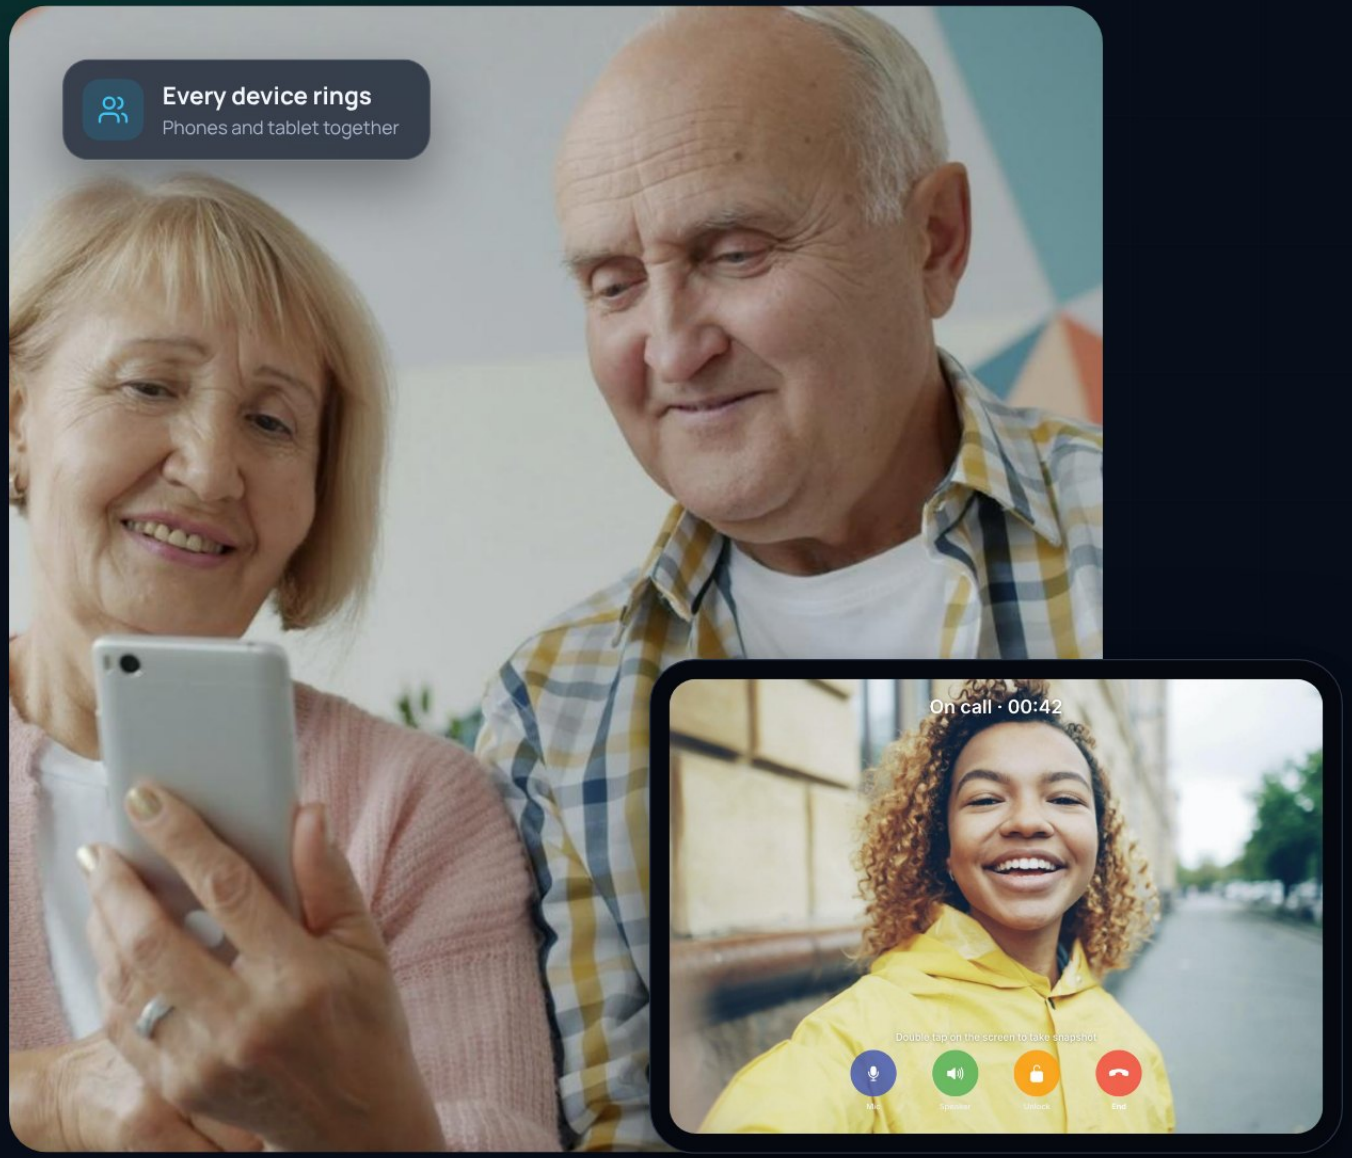
3 The home rings



Every phone in the home rings, with live video of the visitor.

4 The door opens

One tap from the resident, and the visitor sees and hears “Door open”.



• FOR RESIDENTS

See who's there, wherever you are.

Rings like a phone call
Full screen, even when the phone is locked or the app is closed.

See them before you answer
Live video while it rings. Answer, decline or just tap Unlock.

The whole home rings
Every phone and tablet in the flat. The first to answer takes it.

A tablet on the wall
Reuse an old tablet as an always-on door screen.

● IN THE CAR

Answer the door from the driving seat.

Calls come through CarPlay and Android Auto like any other call. Accept, talk hands-free, and let the courier in before you've even parked.

Accept answers at once
Even on a locked phone

Hands-free
Car speakers or a headset

"Hey Siri, unlock gate"
Or Google Assistant

Default entrance
One tap as you arrive

● KEYLESS ENTRY

Your face is the key.

Residents open the door with Face ID, a fingerprint or a passcode, straight from the phone's browser. Nothing to carry, nothing to copy.

Passkey

Face ID or fingerprint. No password to steal.

Passcode

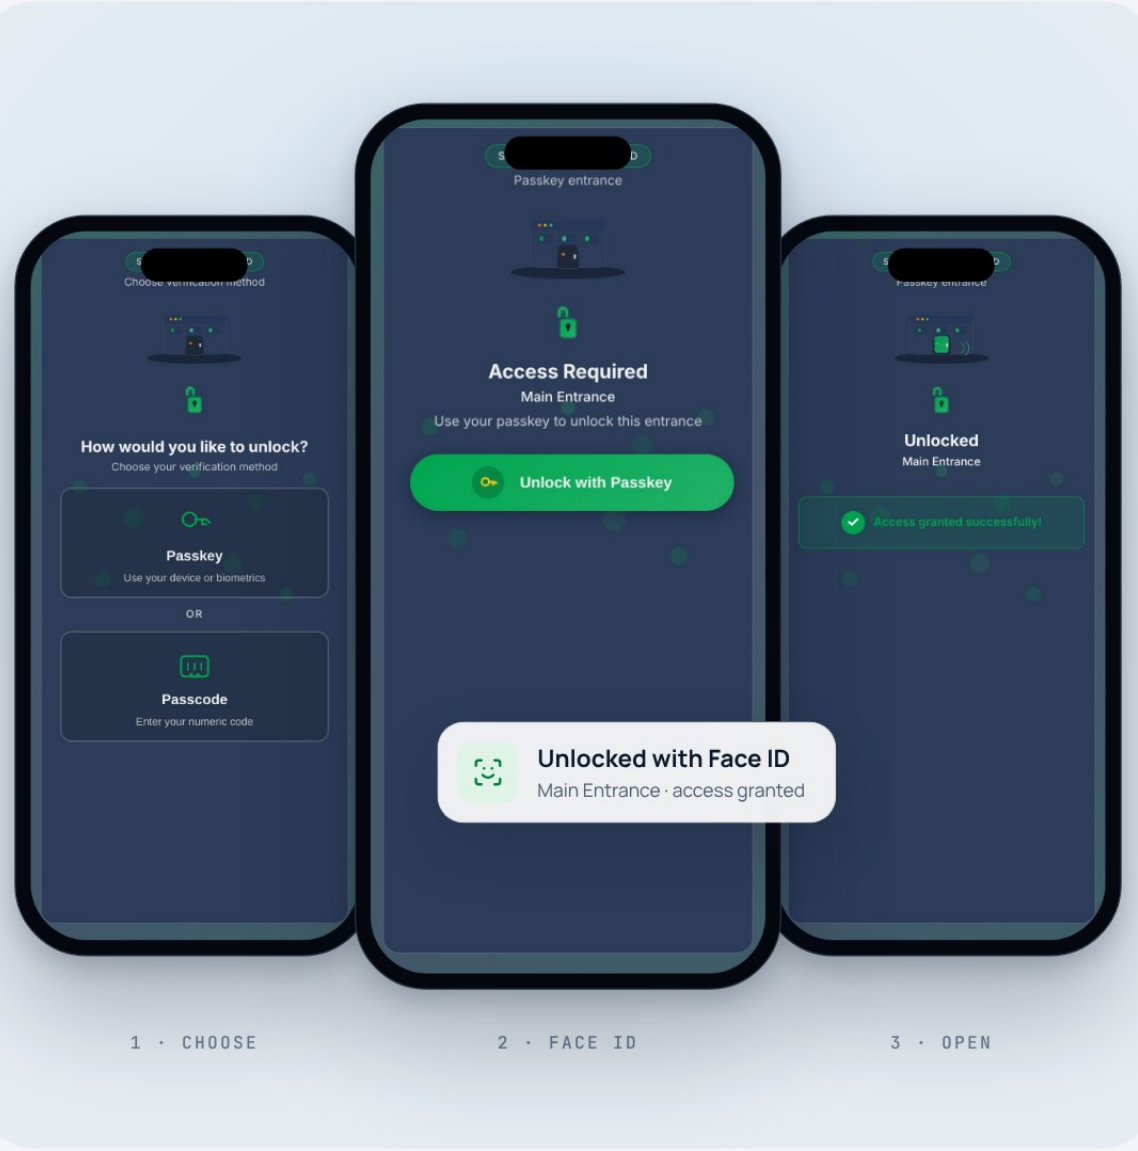
Type the code on the phone's number pad.

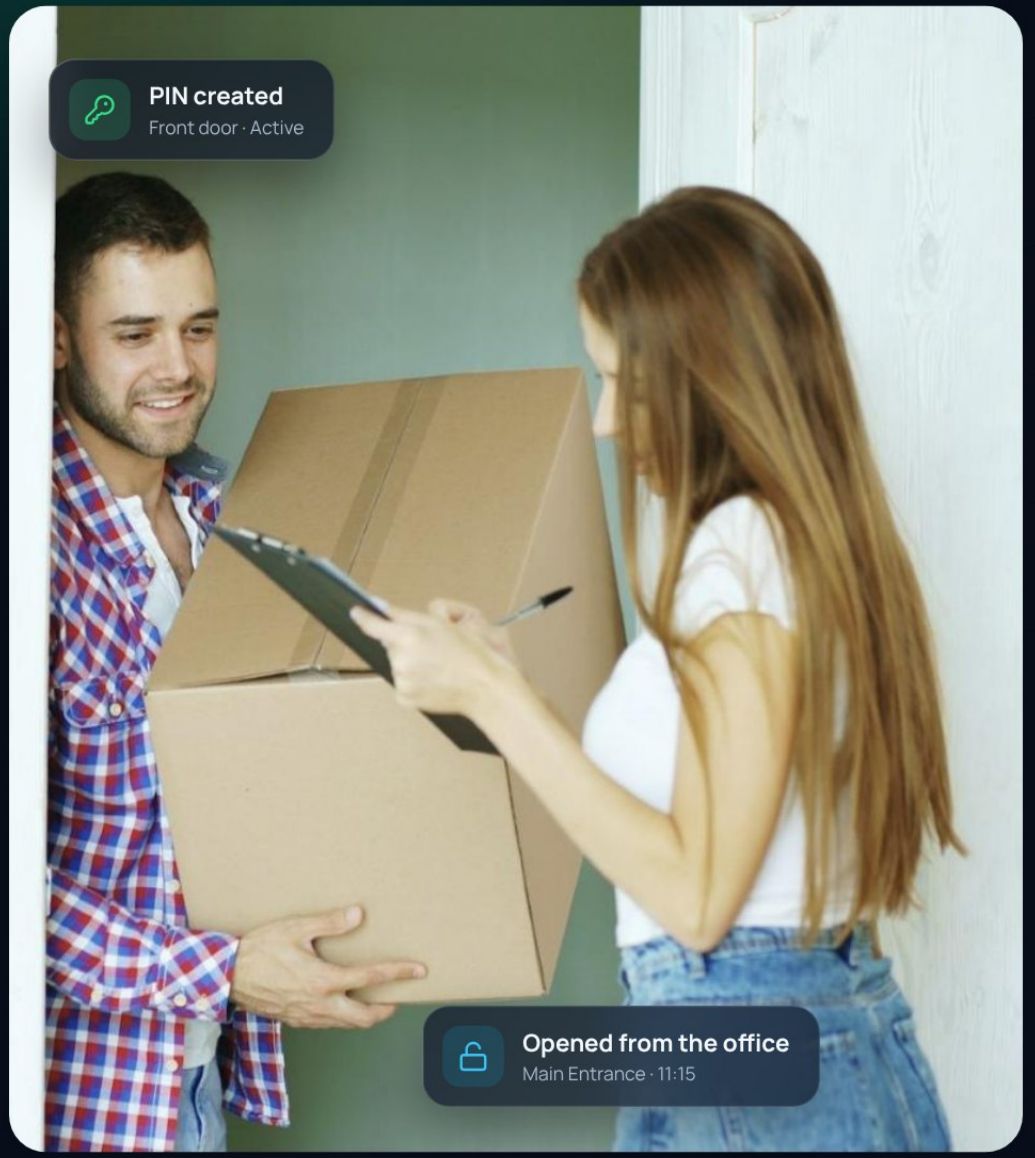
Tap or scan

An NFC tag or QR code at the door.

No app needed

Works in the browser on any modern phone.





GUESTS AND DELIVERIES

Let people in. Even when you're out.

A DAY AT THE DOOR

08:30	**The cleaner**	Lets herself in with her own PIN code.
11:15	**A courier**	Answered from the office. Parcel left safely inside.
14:00	**Mum**	Invited by email, with her own access. No spare key.
17:45	**A friend**	Sent a one-time link that expires on its own.
19:30	**The takeaway**	Let in from the car on the way home.

Every call and unlock is logged, with a snapshot when you need one.

● AT THE ENTRANCE

Built for the street.

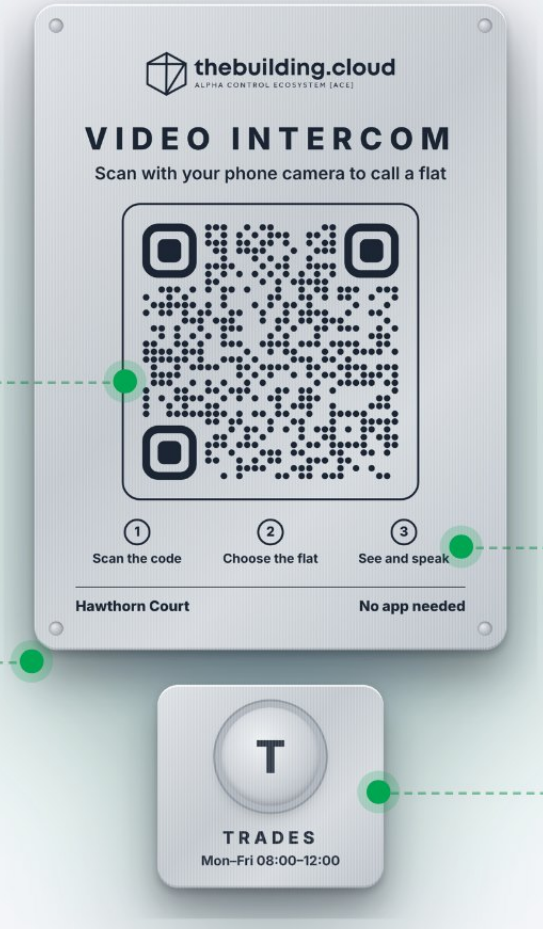
One engraved plaque replaces the old panel of buttons. Visitors scan, trades press 'T'.

Engraved QR code

Any phone camera opens the call page. Nothing to install.

Stainless steel

No buttons, grille or camera for vandals to break.



Three clear steps

Scan the code, choose the flat, see and speak. Printed on the plaque.

The trades button

Opens only during the trade hours you set, for post and deliveries.

Fob and keypad readers (Wiegand) · Fail-safe or fail-secure locks · Works alongside existing intercoms, e.g. CAME · FireBird door controller

● FOR MANAGERS

Every door.
One dashboard.

Residents, entrances, PINs and logs in the app or on the web. Changes go live in seconds, with no engineer visit.

Residents
Add or remove people in minutes.

PINs and guest links
Codes and links that expire.

Every event logged
Calls and unlocks, ready to export.

Hardware online
Scan a FireBird label to add it.

ALSO ON THE SAME PLATFORM

Fire alarms · Burglar alarms · Parking cameras · Notice boards · Issue reports

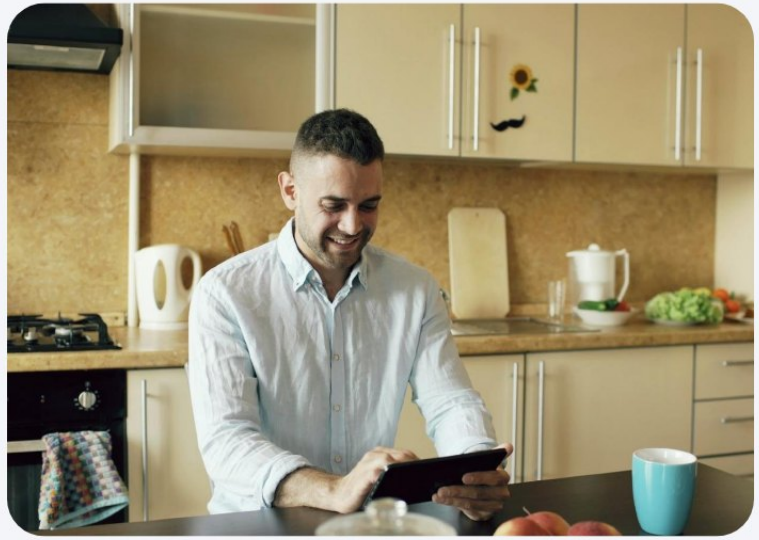
GOOD QUESTIONS

But what if…?

The questions residents and managers ask most, answered straight.



I forget my phone?

You're far more likely to forget your keys. If you do, anyone else at home can open up from their phone, your manager can open it remotely, and keys or fobs can still work alongside.

I'm not at home?

That's the point. Answer at work, at the shops or in the car, and let the visitor in from wherever you are.

I don't like apps?

Visitors never need one. At home, a tablet on the wall works just like a door phone: it rings, you tap Unlock.

Is it private?

Each call goes to one home only, and the visitor is told when you can see them. Calls are encrypted.

We already have an intercom?

Keep what works. We can connect to existing systems such as CAME and add the app on top.

Is it costly to install?

There's no cabling into homes, so the work is at the entrance only. Simple pricing per entrance and per home.

• WHY SWITCH

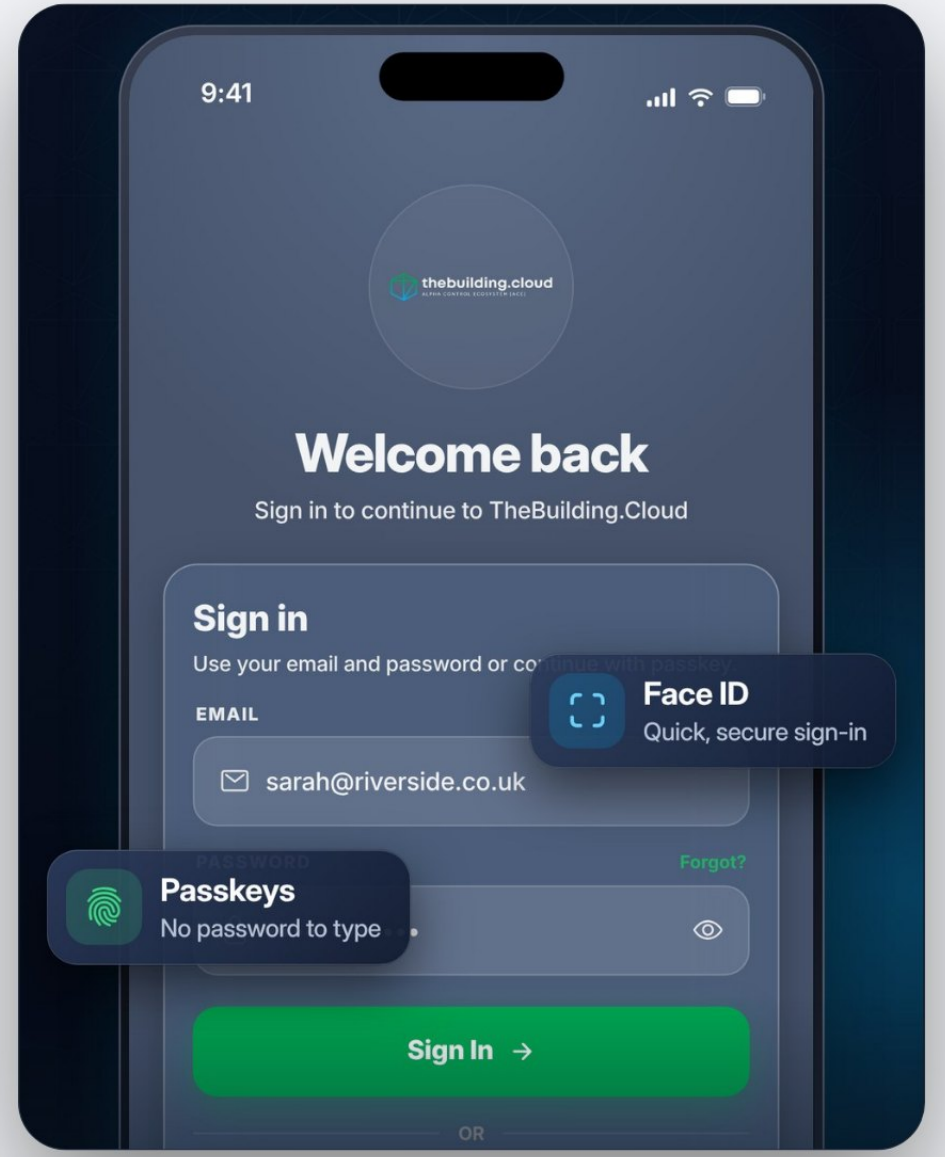
Why it's an easy decision.

	WIRED INTERCOM	THEBUILDING.CLOUD
Installation	✕ Cable to every home	✓ **Work at the door only**
See the visitor	✕ Often audio only	✓ **Live video before you answer**
Away from home	✕ Can't answer	✓ **Phone, watch or car**
Keyless entry	✕ Keys and fobs	✓ **Face ID, passcode, NFC or QR**
Guests	✕ Lend a key	✓ **PINs, invites, one-time links**
Changes	✕ Engineer visit	✓ **Live from the dashboard**
Records	✕ None	✓ **Every call and unlock logged**
Upgrades	✕ Replace the hardware	✓ **Updates over the air**

Say goodbye to…

- ~~Handsets wired into every home~~
- ~~Keys and fobs to cut and chase~~
- ~~Engineer visits for every change~~
- ~~Missed visitors and parcels~~
- ~~Buzzing in people you can't see~~

One plaque at the door. One app for everyone.



SECURITY

Secure by design.

Every call, unlock and change is private, permissioned and on record.

Private calls
Each call goes to one home. No one else can listen in.

Passkeys and Face ID
Sign in and unlock with no password to steal.

Role-based access
Owners, operators, residents and guests see only what they should.

Full audit trail
Who opened which door, and when.

Remove in a tap
Delete a resident or a PIN and their access ends.

Updates over the air
The app and door controllers stay current without a site visit.

GETTING STARTED

From demo to handover.

All the work happens at the entrance. Residents just download the app and accept their invite.

01

Demo and survey

Try a demo plaque on your own phone, then we check power, connection and the door release.

02

Fit at the door

Old panel out. QR plaque, 'T' button and FireBird controller in.

03

Invite residents

We add every home. Residents get an email invite to the app.

04

Test and hand over

A full test, a live walkthrough and a short guide for residents.

What's included

- QR call plaque
- App for every resident
- 'T' trades button
- Web dashboard
- FireBird controller
- Handover guide

No work inside the homes

Everything new is fitted at the entrance. Residents just use their phones.
